

PROTOTYPE IN DEVELOPMENT

Meet YANI

Features & Prototype Guide

A family-first AI companion being designed to talk, teach, play and grow with children ages 3–13.

YANI is the flagship innovation of BR Innovation & Technology. This guide explains the experience we are building, the principles guiding it and the current prototype stage.

AGES 3–13	FAMILY FIRST	IN DEVELOPMENT
Designed to grow	Safety-led direction	Features may evolve

THE YANI EXPERIENCE

What can YANI do?

Five experience areas shaping the current product direction.

Smart Learning

Stories, quizzes and guided activities designed to make curiosity feel playful.

Natural Conversations

Friendly, age-aware interactions that help children ask, explore and express ideas.

Fun & Entertainment

Songs, jokes, stories and screen-light play ideas for joyful everyday moments.

Daily Assistant

Gentle prompts for routines, schedules and positive habits that grow over time.

Care & Safety

A family-first direction centred on privacy, supervision and age-appropriate design.

Prototype note Capabilities are being tested and refined; final functionality, availability and pricing have not been announced.

BUILT WITH FAMILIES IN MIND

How we're shaping YANI

The product direction begins with childhood, trust and thoughtful technology.

01

Age-aware by design

Interactions are being shaped around different stages from early discovery to growing independence.

02

Supervised testing

Family feedback and observed use help the team refine usefulness, clarity and comfort.

03

Privacy & safety

The direction prioritises protective defaults, responsible data choices and parental oversight.

WHERE THE PROTOTYPE IS NOW

EARLY 2026

Prototype Built

Core interactions assembled into YANI's first working prototype.

MID 2026

Testing & Refinement

Supervised trials inform safety, learning quality and family experience.

What “prototype” means

YANI is not yet a finished retail product. Hardware, conversations, learning activities and safety controls are being evaluated and may change before launch. Public demonstrations describe our direction—not a promise of final specifications.
